Peer Review
Airport Traffic Controller

1. Great overview of project, very doable and interesting.
2. It's not exactly clear how you can determine the most optimal sequence to reduce drag. Does that mean if a smaller airplane takes off after a bigger one there will be less drag or vice versa? Just a little confused.
3. You'll be starting 100 VMs to simulate your clients?
4. Elaborate on "some tests for machine learning model"
5. Latency is a good measurement though
6. Very clear milestones and good division of labor.
